

# INFRARED FLASH CURING DRYERS

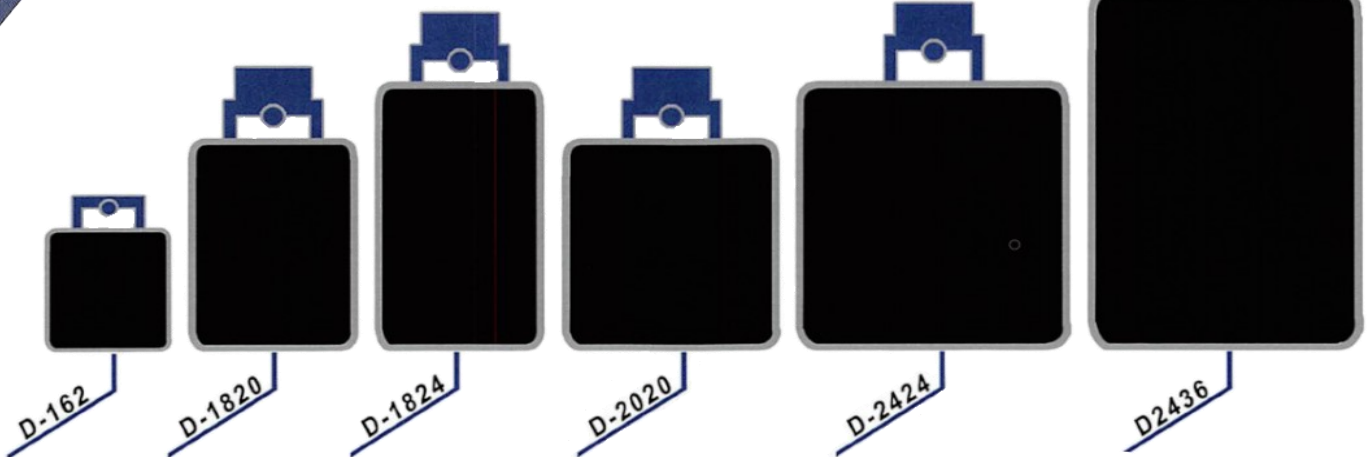

- Solid State Heat Control
- Height Adjust
- Even Heat
- 360- Rotation
- Caster Wheels
- For Plastisol Ink Curing

Control Panel

Level Adjustment

All Ranar screen printing flash cure units are energy efficient by design, and have the highest watt density per square inch on the market. Our infrared heater panels are manufactured to give you even heat distribution. No hot or cold spots with our units. Our infrared flash dryer heat elements are molded into wide surfaced quartz panels, backed with 1 inch thick insulation. The heater box is packed with 2 inches of high temperature fiberglass insulation, thus directing 90% of its heat energy directly to the garment .

# INFRARED AIR FLASH CURING DRYERS

- Solid State Heat Control
- Height Adjust
- Even Heat
- 360° Rotation
- Caster Wheels
- For Water-Base Ink Curing

Flash or dry water based screen printing ink on t-shirts, textiles and garments. Our heat panels have the highest wattage available to produce even heating. Warm air is forced through holes in the infrared heat panel to speed up the evaporation process of drying water base and discharge inks. This has an added benefit that softens the impact of heat from radiant infrared panels. This process also helps protect delicate fabrics such as polyester and spandex. With solid state heat controls, you can fine tune the temperature to achieve desired results.
